

P.Jogeswara Rao
19B91A12D1

1. Write a program to implement the Single Linked List operations (Insertion, Deletion, searching, reverse).

[30 SEP

2020]

```
#include<stdio.h>
#include<stdlib.h>
void insertAtBeginning(int);
void insertAtEnd(int);
void insertAfter(int,int);
void display();
void removeBeginning();
void removeEnd();
void removeSpecific(int);
void search(int);
void displayrev();
struct Node
{
int data;
struct Node *next;
}*head = NULL;
void main()
{
int choice,value,choice1,loc1,loc2,ele;
printf("P.JOGESWARA RAO\n 19B91A12D1");
while(1)
{
mainMenu: printf("\n\n***** MENU *****\n1. Insert\n2. Delete\n3. Display\n 4.
displayrev\n 5. search \n6. Exit\nEnter your choice: ");
scanf("%d",&choice);
switch(choice)
{
case 1:      printf("Enter the value to be insert: ");
scanf("%d",&value);
printf("Where you want to insert: \n1. At Beginning\n2. At End\n3. Insert After\nEnter your choice: ");
scanf("%d",&choice1);
switch(choice1)
{
case 1:      insertAtBeginning(value);

```

```
return 0;
```

```
}
```

Output

The screenshot displays the Dev-C++ IDE with the source code for an AVL tree program. The code is in C++ and includes standard headers, a Node struct, and functions for height calculation, max, and node creation. The output window shows the program's execution, including the initial key, the sequence of keys, the result after deletion, and the process exit message.
